CHALMERS | Anonymous code DAT321 - 0002 - AGR | Anonym kod | Points for question (to be filled in by teacher) | Poäng på uppgiften (ifylles av lärare) | Consecutive page no. Löpande sid nr 1 | Question no. Uppgift nr 1a

F6: Portability

Why portability?

Quality-in-use, the system allows user to operate on a wide range of smartphones and tablets, across multiple operating system versions, with varying hardware capabilities. ~~the~~ It affects on user. Users can intall CityMove on their mobile or tablet, ~~with either~~ and it supports the operating system from old to latest versions. During the users feedback, more than 99% users among 10000 users respond that they are satisfied with system can be installed and operated on a wide ~~rag~~ range of phones and tablets across several operating system versions.

Vague

Why usability?

F7: Usability

Quality-in-use, since the system adapts its UI to support users with different accessibility needs without manual configuration. It affects on users. Users can easily learn how to navigate using CityMove through dashboard.

During the users feedback, ~~99%~~ more than 90% users among 10000 users respond that they are satified to manage to use CityMove without manual configuration.

All quality types affect users at the end; the link can be just more/less direct; the explanation "it affects the user" is vague.

CHALMERS | Anonymous code DAT321-0002-AGR | Anonym kod | Points for question (to be filled in by teacher) | Poäng på uppgiften (ifylles av lärare) | Consecutive page no. Löpande sid nr 2 | Question no. Uppgift nr 1b

F2: Reliability.

1) Source: User

2) Stimulus: User selects a route and taps "start navigation".

3). Artefact: Backend services receive call on start navigation of the selected route, then navigate to navigation page where it displays map with active route guidance.

4) Environment: temporary network degradation, network latency presents.

5). Response: System continues providing active ~~rou~~ route guidance without interruption.

6) Response Measure: During temporary 5-minute network degradation, more than 99% of navigation continues working without interrupting

F5: Compatibility.

1) Source: User

2) Stimulus: User search route to go home from his/her current location at ~~current~~ current time, by inserting current location and home address, then taps search route.

3). Artefact: Backend services receive inserted ~~text~~ information, and ~~retrative~~ ~~retrive~~ retrieve the user current location and home address, also retrieve the current real-time, integrate these data from external transport and mapping service providers, then ~~the~~ refresh ~~t~~ the dashboard and display the routes options from searching.

4). Environment: slow network, network latency presents.

5). Response: Dashboard refreshes current time while retrieving data from providers, and display searched routes from current real-time to later.

6) Response Measure: Among 10000 searches, more than 99% of searched routes results are from real time.
